EVERY DOLLAR ON THE RECORD

Your town's spending, posted as it happens.

Civic-Chain runs municipal contracts, approvals and payments in one place, and writes the public record the moment money moves.

SEE IT YOURSELF

No account.

Every contract and payment on one public page. No login, no phone call, no records request.

PAID IN SECONDS

About 4 seconds.

That's how long a vendor payment takes, instead of the one to three days a bank transfer needs.

LESS PAPERWORK

No request needed.

Most records requests stop being necessary. The answer is already public.

Award, confirm, pay and publish in a single step.

1. Award the contract
2. Confirm the work is done
3. Vendor is paid in seconds
4. It's on the public record

SAME-DAY WORK, SAME-DAY PROOF

The road washes out at 7 a.m. It's fixed and paid for by supper.

A culvert washes out before people are up for work. The board approves the emergency contract that morning, the crew finishes by mid-afternoon, and the contractor is paid before dinner, with every step already on the public record.

Same-day emergency contracts where your town charter and state law allow.

Tracked like a package
You can follow a $30 order to your door. Public money should be too.

Nothing to download
If you can open a website, you can read your town's ledger.

Safe with your data
US-based data, bank-level encryption, independent security audit underway.

See it for yourself.

Point your phone camera at the square.
It opens straight to the live page.

QUESTIONS? ASK A PERSON.

What the current process costs you

Staff time disappears into reporting.
Finance staff spend hours a month rebuilding numbers that are already stale the day they're published. Records requests pile on top of that, and each one costs real time and money.

Vendors charge you for the wait.
Contractors price slow payment into their bids. The town quietly overpays, and work starts later than it should.

2 weeks Average time from signing to a live public page, with no new hardware and no accounts for residents to create. CIVIC-CHAIN PLATFORM

What Civic-Chain does about it

One place for contracts and approvals
Requests, awards, change orders and sign-offs in one system. One source of truth, not six inboxes.

An audit trail that builds itself
Every approval, change and payment is time-stamped as it happens, so audits stop being a scramble.

You decide who sees what
Role-based access keeps internal detail internal and the public view public.

Continuity when staff turn over
The process lives in the system, not in one person's head, so new staff pick it up in hours.

Reporting on top of what you already run
Connects to your ERP, whether that's Harris, SAP or Oracle. Budget-vs-actuals dashboards and one-click public reports.

Money comes to towns that show their books
Business owners and grant-makers can see how the town handles money before they commit, so they are likelier to invest here.

RESIDENTS GET A REAL SAY

Location-verified input means the board hears from the people who actually live in the town, and decides with good data instead of whoever showed up to the meeting.

It fits the way you already work.

Nothing gets ripped out and nobody gets hired. Rollout is a short kick-off and a read-only connection to your existing systems.

And it's founder-led: you work with the people who built it, not a ticket queue.

TAKE A LOOK WITH YOUR OWN NUMBERS

A short walk-through, no obligation.
